

Project: Style and economy make DuoHeat® tops for exclusive waterfront development

Products Dimplex DuoHeat® radiators.

Profile: One of the latest Persimmon Homes developments at the exclusive Cardiff Bay includes the new two-in-one DuoHeat electric radiators providing contemporary styling and controllable economic heating.

The Piazza is a waterfront development of 46 high specification, two-bedroom apartments plus some three and four-bedroom townhouses located in the vibrant Cardiff Bay area, offering modern living close to the city and M4 network.

The stylish DuoHeat, ideal for new build, features both the benefits of electric heating, with low installation costs and no maintenance requirements, plus 24-hour controllable and economical heating for home owners.

At The Piazza, the DuoHeat system is installed on a pilot wire for extra economy making intelligent use of energy available at different times of the day to provide comfortable heating as well as fast response instant warmth when it is needed.

A low wattage radiant panel using thin film element technology in the front of the DuoHeat radiator provides boost heat to quickly raise room temperatures and supplements the low cost energy retained in the heart of the heater which maintains comfortable background room warmth.

The properties – apartments starting at £179,000 and townhouses from £300,000 – have stunning views across Cardiff Bay and feature open plan living room, dining room and kitchen in the apartments.

This Persimmon waterside regeneration development of new homes is being built in line with government's policy to encourage the use of previously used land.
